Miller 20 Fluid Head

The Miller 20 fluid head is ideal for the new generation of lightweight professional video cameras, including CCD-based camera assemblies, used in broadcast, educational and industrial applications.

The Miller 20 features a new continuously variable fluid system that ensures consistently smooth pan and tilt control under all conditions. Additionally, the Miller 20 incorporates a counterbalance system integrated with a sliding, quick release camera platform that allows cameras to be balanced quickly and remain balanced at extreme tilt angles. Pan and tilt locks, dual handle carriers and integrated claw-ball levelling are also included.

Complementing the Miller 20 are a choice of three tripods. The new Compact tripod features new leg locks with overtightening protection, integrated above-ground spreader, impressive lift range with minimum flex quotient and sleek, black-anodized finish. The Miller 20 can be additionally suited to flat/column type bases.
